Maple Systems' new Dual-Ethernet HMIs, the 7" HMI5070DL and the 9.7" HMI5097DXL, divide industrial control and remote access functionality between two distinctly separate Ethernet networks: an internal industrial communications network, and an external wide area network (WAN). This offers customers a connected IIoT while providing increased security of an internal control network. Two 10/100/1000 Base-T Ethernet ports and up to a 1 GHz processor keep machinery operating at peak performance.
