Dual-ethernet HMIs increase control network security

For better protection of your industrial control network and to learn more about Maple Systems' dual-ethernet HMIs.

Maple Systems' 7 in. HMI5070DL and 9.7 in. HMI5097DXL dual-ethernet HMIs divide industrial control and remote access functionality between two distinctly separate Ethernet networks: an internal industrial communications network, and an external wide area network (WAN). This offers customers a connected IIoT while providing increased security of an internal control network. Two 10/100/1000 Base-T Ethernet ports and up to a 1 GHz processor keep machinery operating at peak performance.
