CONTROLS & AUTOMATION

Maple HMIs are popular in the packaging industry — like on this Rhino tray sealer.

Maple Systems Inc.

808 134th St. SW, Suite 120 • Everett, WA 98204

Phone: 425/745-3229 • Fax: 425/745-3429

Email: sales@maplesystems.com

www.maplesystems.com

Maple Systems offers a complete line of display products for OEMs who need an operator interface for their packaging system, including touchscreen graphic HMIs, text-based displays, and HMCs (human-machine controllers) that combine the features of a stand-alone HMI with a PLC.

These products connect to over 100 different programmable controllers from leading manufacturers including Allen Bradley, Schneider Electric, GE Fanuc, Siemens, Mitsubishi, and Omron using serial or ethernet. The software that configures these products is very easy to use yet provides many features. Maple Systems displays meet strict certification standards including support for Class I, Division 2 installations.

Over the years, we have continuously strived to improve our products by employing the latest in technological advances as well as ensuring that every product we sell is fully tested and inspected before it leaves our manufacturing facility. We recognize that service and after-the-sale support is just as important to our customers as is the quality of construction. This is why we continue to offer superior customer support, complementary technical support and a robust online Support Center.

Although our products are used in a wide variety of industrial settings, the majority of our customers are systems integrators and OEMs who use our products in packaging-related applications. Our displays range in size from 15" for machines that require significant interaction from the operator, to a tiny 3.5" display with touchscreen for basic information.

Maple Systems specializes in the design, manufacture and support of innovative human machine interfaces for almost 30 years. Our primary emphasis is towards providing operator interface solutions to the full range of packaging applications. We take pride in providing superior sales training support, customer application assistance, and the technical support required to apply our products successfully.
