Maple Systems: Remote monitoring

EasyAccess 2.0 is the best way to remotely access Maple HMIs and connected PLCs; users can enjoy easy installation, secure data transmission, and convenient offsite troubleshooting from anywhere in the world.

By **Melissa Larson, Products Editor**

In a time where more devices exist than ever, connecting users to operational equipment through the cloud is a necessity.

Similar to instant messaging software such as Skype, Facebook Messenger, or WhatsApp, EasyAccess 2.0 allows users to instantly communicate with their HMI without spending time memorizing the HMI's IP address, or configuring complicated port mapping. As its name implies, EasyAccess 2.0 makes remote monitoring and troubleshooting Maple Systems HMIs efficient and easy.

EasyAccess 2.0 enables customers to:

Access, monitor, and control HMI screen activity as though an operator is standing in front of the machine

Upload/download HMI projects to make changes and modifications to the HMI

Upload/download PLC projects using pass-through functionality built into the Utility Manager to troubleshoot PLC program issues.
