# How to Install the DIN Rail Mount to your Unit

1. Uninstall the wall mounting kit from the unit. To uninstall wall mounting kit, remove all screws holding the kit to the unit. (Screws to be removed are circled in green below.)

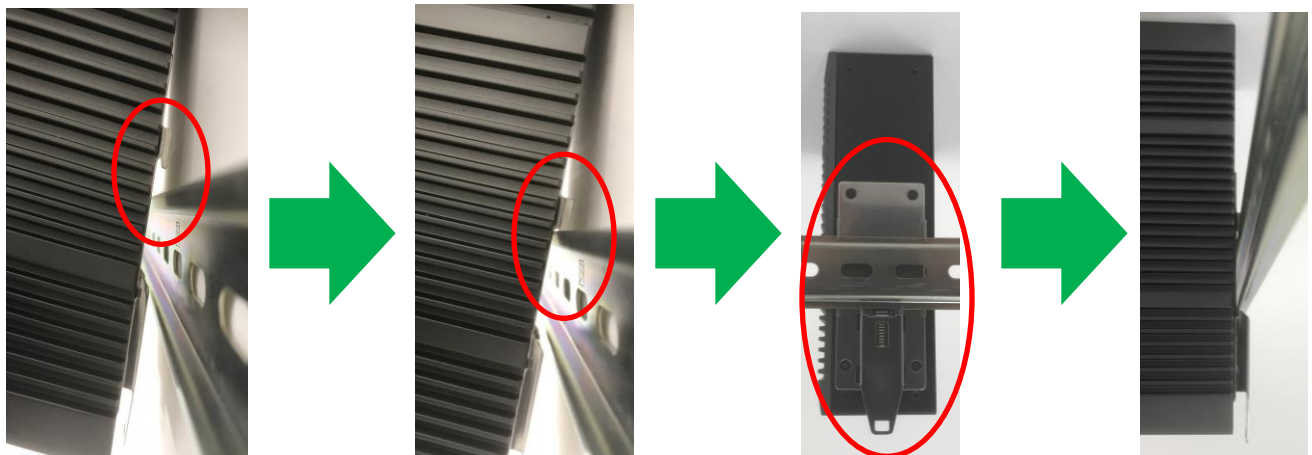

2. Now attach the DIN rail mounting kit to the back of the unit. Place the DIN rail kit into its proper place and screw in all four screws to secure the kit to the back of the unit. (Proper installation is depicted below.)
    Note: The DIN rail kit should be installed with the tab protruding from the bottom of the unit. The unit is designed to only install in the correct orientation.

3. To mount the unit to the DIN rail simply hook the **top hooks** to the rail. Now press the unit flat to the rail until you hear a click. (Proper installation is depicted below.)

4. To release the unit from the DIN rail, simply pull down on the tab and rotate the unit away from the rail and up to disengage the hooks.
