2 Unpacking the Unit

Unpack and check the delivery. If damage is found, please contact the supplier.

NOTE: Place the operator panel on a stable surface during installation. Dropping it or letting it fall may cause damage.

The package includes:
(1) Installation Instruction, 2-sided A4 *1 (2) Human Machine Interface *1 (3) Power Connector *1
(4) Brackets & Screws *1 pack

3 Installation Instructions

Use a control box that provides enough stiffness. Cutout Dimension: 384 mm x 247 mm. Secure the operator panel in position, using all the fastening holes and the provided brackets and screws. Screw Torque: 2.6 ~ 3.9 lbf.in. (For reaching waterproof effect and preventing the panel from being deformed.)
Plan for adequate space around the unit and inside the enclosure, for ventilation and cables. Consider the heat from other devices inside the enclosure. The ambient temperature around the unit must be 0 ~ 50°C

Minimum required clearances (along the overlay): Top / Bottom / Sides 15 mm
Maximum panel thickness: 4 mm

4 Power Connections

⚠ Power Connector Specifications:
Wire AWG: 24~12
Wiring Conductor Minimum Temperature: 75°C
Screw Torque: 4.5 lbf-in (max.)
Copper conduct only.

Spécifications du connecteur d'alimentation:
AWG de fil: 24 ~ 12
Température minimale du conducteur de câblage: 75°C
Couple de vis: 4.5 lbf-in (max.)
Conducteur en cuivre seulement

**NOTE: Connect positive DC line to the '+' terminal and the DC ground to the '-' terminal.**
5 System Settings

After powering on the HMI, click the icon ⚙ in the upper right corner of the screen to open the system settings menu.
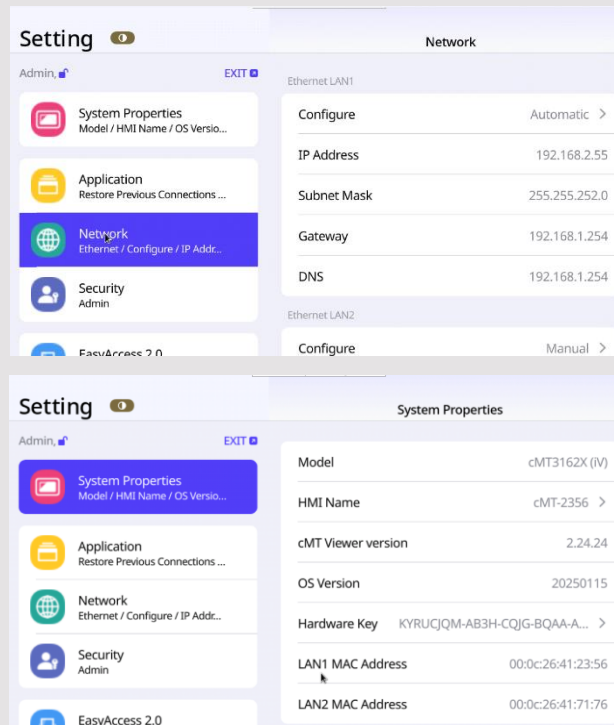

Password Setting
In the Security tab, modify the Admin password. The system will prompt for the Admin password (default is 111111). After entering the current password, new password, and confirming the new password, save the changes.
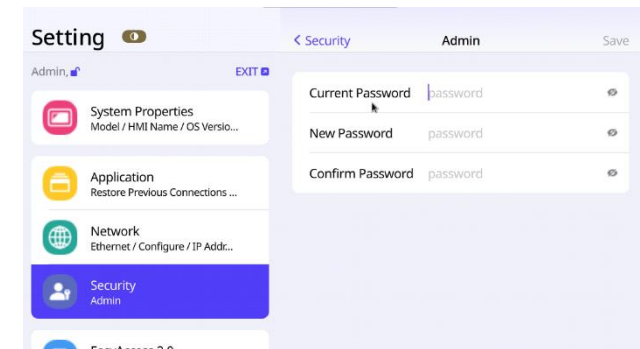

Network Settings

In the Network tab, configure network settings. The system will prompt for the Admin password. Enter the Admin password set in the password setting step, and then configure the relevant network parameters.

System Properties

In the System Properties, options such as date, time, sound, and language can be adjusted. Settings that require Admin privileges will prompt for the Admin password. Enter the Admin password set in the password setting step.

6 Connecting to cMT / cMT-X HMI

On the main screen, click the icon ➕ in the upper right corner. The Connect page will display cMT / cMT X HMIs within the same network. Select the desired HMI to operate, click + and enter the user password for that HMI. Once the HMI's project file has fully loaded, it will automatically display on the cMT3162X (iV) screen.

7 Restore Factory Default

To restore factory default, follow section 5 instructions of this manual to open the Setting page, and then select [System Properties], press [Reset HMI to Default], enter the Admin password or "default111111", and press [Reset]. Please note that all stored project files and data will be erased.

8 Battery Replacement

Battery Specification: Type CR2032, Rated 3V

Battery replacement shall be performed by qualified personnel (engineer) only and care must be taken when handling lithium batteries.

CAUTION	**NOTE:** Make sure that all local and national electrical standards are met when installing the unit. Contact your local authorities to determine which codes apply.
⚠ Power	Use power output that meets SELV (Safety Extra-Low Voltage) requirements. The unit can be powered by DC power only, voltage range: 24±20%, compatible with most controller DC systems. The power conditioning circuitry inside the unit is accomplished by a switching power supply. The peak starting current can be as high as 2A.
⚠ Fusing Requirements	If the display does not come on within 5 seconds of power up, remove power. An internal fuse will prevent damage if the polarity of the DC power is incorrect. Check wiring for proper connections and try to power up again.
⚠ High Voltage	An Internal fuse will prevent damage for overcurrent condition however it isn't guaranteed. DC voltage sources should provide proper isolation from main AC power and similar hazards.
⚠ Emergency Stop	A Hard-wired EMERGENCY STOP should be fitted in any system using an HMI to comply with ICS Safety Recommendations.
⚠ Supply Voltage Condition	Do not power the unit and inductive DC loads, or input circuitry to the controller, with the same power supply. Note: The 24 VDC output from some controllers may not have enough current to power the unit.
⚠ Wire Routing	a. Power wire length should be minimized (Max: 500m shielded, 300m unshielded). b. Please use twisted pair cables for power wire and signal wire and conform to the impedance matching. c. If wiring is to be exposed to lightning or surges, use appropriate surge suppression devices. d. Keep AC, high energy, and rapidly switching DC power wiring separated from signal wires. e. Add a resistor and capacitor in the parallel connection between the ungrounded DC power supply and the frame ground. This provides a path for static and high frequency dissipation. Typical values to use are 1M Ohm and 4700pF.

DANGER	
⚠ Hardware Considerations	The system designer should be aware that devices in Controller systems could fail and thereby create an unsafe condition. Furthermore, electrical interference in an operator interface can lead to equipment start-up, which could result in property damage and/or physical injury to the operator. If you use any programmable control systems that require an operator, be aware that this potential safety hazard exists and take appropriate precautions. Although the specific design steps depend on your particular application, the following precautions generally apply to installation of solid-state programmable control devices, and conform to the guidelines for installation of Controllers recommended in NEMA ICS 3-304 Control Standards.
⚠ Programming Considerations	To conform to ICS Safety Recommendations, checks should be placed in the controller to ensure that all writable registers that control critical parts of plant or machinery have limit checks built into the program, with an out-of-limit safe shut down procedure to ensure safety of personnel.
